

# User Guide

## Pocket Radar

### About the application

This application measure speed of anything that moves. It uses no audio or camera to measure so it can also be used on moving objects in TV.

If you find any errors please report to: [support@picobrothers.com](mailto:support@picobrothers.com)

### How to use it

#### Setup

In order for the application to calculate speed you need to set the distance the object is moving. Tap on SET and enter distance.

To change unit, tap on km/h or mph.

#### Measure

To measure the speed hold down the Measuring button when the object start to move and release it when it has travelled the distance you defined in the settings.

#### Statistics

The application calculates average and maximum speed. To reset any of these, simple tap on respective indicator.

There is also a pitch counter that is used in sports such as baseball. It counts number of times speed has been measured. To reset it tap on it.
